

ABSTRACT

OPTICAL DEVICE

5 An optical device comprising an enclosure having a wall
member defining a cavity and a sealable fibre entry
portion, an optical component located within the cavity
and at least two optical fibres connected to the
10 optical component and extending, substantially adjacent
one another, through the entry portion. The invention
also concerns a kit-of-parts for forming such a device,
and a method of sealably enclosing an optical
component.
